

## Assumptions

- In the order of statements, {definetypestmts} are placed after {type definitions}
- Records and Unions can now have records/unions as their fields (nesting)
- Added semicolons to funcallstmt and definetypestmt for uniformity
- Binded colon with global-or-not
- Read function must be called only with TK-ID as argument and not TK-NOM or TK-RNUM constants.
- Records/Unions fields can be also now be written with write
- {stmt}{otherstmts} was replaced with {otherstmts}
- Added TK-OP and TK-CL in conditional statements.
- Removed ambiguity from arithmetic Expression
- Incorporated precedence order in arithmetic Expression
- Introduced firstop and secondop instead of using operator to facilitate precedence
- Made negation of boolean Expression more intuitive by adding parenthesis around the negated boolean Expression.
